DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-17 are rejected under 35 U.S.C. 103(a) as obvious over Wegil 6136272.

The Weigl reference teaches a mixing device and method of operation whereby there is a flow path with opposed surfaces having a gap whereby within the gap, two materials are moved along within a flow to one another. The flows are adjacent one another thereby having a boundary and are spaced with an inter-diffusion boundary. Each respective flow has a velocity and a shear which exists between the relative difference in flow velocity of one flow in respect to the other. With regards to the relative size, and shape of the surfaces and spacing of the flow passage, absent any unexpected result, such modifications are within the skill of a person having ordinary skill in the art to optimize the flow interaction and thus would have been obvious to modify the radial spacing of the surfaces so that the inter-diffusion rate is optimized whereby it is old and well known that the flow characteristics are of a boundary transition is dependent upon the variables of the fluid material characteristics and the channel characteristics in a determination of the Reynolds number, since it has been held that, absent any unexpected result, a mere change in form or shape on the basis of

suitability, in this case the channel spacing or smoothness to optimize the Reynolds number is a matter of obvious mechanical design choice. In re Dailey, 149 USPQ 47 (CCPA 1976). A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955). It has also been held that discovering an optimum value, in this case the value of the channel wall spacing and smoothness of a channel wall, of a result effective variable (Reynolds number) involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Conclusion

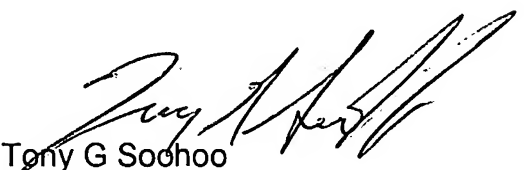

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patent numbers: US 6281254, US 6134950, US 5971158, US 5932100, US 5858187, US 5716852.
